

from the hospital, often 6 to 8 weeks after birth), and a postdischarge stage (from discharge home to approximately 1 year). Is there scientific evidence to support more than one set of micronutrient requirements for infant formulas to support healthy growth and development of the preterm infant at the different stages of development? Are the micronutrient requirements for term infant formulas sufficient for thriving postdischarge preterm infants?

(3) What is the scientific evidence to support a dietary recommendation for a minimum and a maximum quantitative nutrient concentration for selenium, chromium, molybdenum, and fluoride in preterm infant formulas? What limits of intake would ensure safe and adequate exposure to these nutrients? Is there a need to specify the chemical form or other characteristics of these nutrients or their sources to ensure safety and adequacy?

(4) Certain micronutrient interactions, such as vitamin E:linoleic acid, vitamin B6:protein, and calcium:phosphorus, have been identified for full-term infants which have helped to ensure the adequacy of full-term formulas. Are there micronutrient interactions that can be identified for preterm infants that will help to ensure the nutrient adequacy of infant formulas for this population? Are there recommended ratios for metal cations? Is the evidence of interaction between these minerals sufficiently strong to suggest that the ratios should be ensured for the health of preterm infants?

(5) In an earlier task under this contract (61 FR 58566, November 15, 1996), LSRO/ASNS agreed to investigate whether there is evidence of a benefit to preterm infants from ingestion of taurine and carnitine, as well as whether there is evidence that would provide a basis for a requirement for minimal intakes of each of these substances. Is there adequate evidence of benefit of other substances not listed in this notice to support a requirement for their inclusion in preterm infant formulas?

LSRO/ASNS will use these questions as a guide in its investigation. ASNS will prepare a comprehensive final report that documents and summarizes the results of its evaluation.

FDA and ASNS are announcing that the LSRO/ASNS expects to hold a public meeting on this topic on Friday, March 27, 1998. The meeting will begin at 9 a.m. It is anticipated that the public meeting will be up to 1 day, depending on the number of requests to make oral presentations. Requests to make oral presentations at the open meeting must be submitted in writing and received by

Friday, February 13, 1998. Written requests to make oral presentations of scientific data, information, and views at the open meeting should be submitted both to Daniel J. Raiten (address above) and to the Dockets Management Branch (address above). Two copies of the material to be presented must be submitted to each office on or before March 20, 1998. The open meeting will be held in the Chen Auditorium, Lee Bldg., ASNS (address above).

FDA and ASNS are also inviting submission of written presentations of scientific data, information, and views. These materials should be submitted on or before July 1, 1998. Two copies of the written materials must be submitted to each office.

In accordance with its contract with FDA, ASNS will provide the agency with a scientific report on or about September 30, 1998.

Dated: January 6, 1998.

Associate Commissioner for Policy
