SUPPLEMENTARY INFORMATION:

Background

The Bonneville cutthroat trout is native to the Bonneville Basin in Utah, Idaho, Nevada, and Wyoming. Its habitat is widely distributed and variable and includes both river and lake ecosystems. The subspecies occurs in streams with coniferous and deciduous riparian trees at 3,500 meters (m) (11,483 feet (ft)) above mean sea level, to streams in sage-steppe grasslands with herbaceous riparian

zones at 1000 m (3281 ft) above mean sea level, to lake environments.

On February 26, 1998, the Fish and Wildlife Service (Service) received a petition to list the Bonneville cutthroat trout as a threatened species pursuant to the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*). On December 8, 1998, the Service published a 90-day notice on this petition, finding that it presented substantial information indicating that listing this species may be warranted, and initiating a status review of the species.

Public Comments Solicited

The Service is soliciting information primarily on (1) genetic variability and purity of the various subpopulations, (2) population status and trends, (3) management policies and conservation plans affecting Bonneville cutthroat trout, and (4) threats to the species, including those identified in the petition. The original comment period for this action expired January 7, 1999. With this notice, the comment period is reopened for an additional 30 days, until February 12, 1999. Comments, information and data should be submitted to the Service's Utah Field Office (see **ADDRESSES** above.)
