

procedure will provide small businesses with a meaningful opportunity to compete in an open auction.

73. *Alter the Transfer Requirements for Certain Licenses:* The Commission proposes to modify the Commission's transfer requirements to correspond to the Commission's proposed changes in the eligibility requirements, and to encourage rapid construction of C and F block systems. Specifically, the Commission tentatively concludes that C and F block licenses won pursuant to open bidding at Auction No. 35, or any future open auction for such spectrum, would not be subject to a transfer holding rule. For licenses won in closed bidding in any C or F block auction, the Commission seeks comment on a proposal that will allow a licensee to assign or transfer its license to any qualified entity, entrepreneur or not, upon the licensee's completion of its first construction benchmark, whether or not it takes the full five years allowed by the rules. The Commission also seeks comment on whether it should evaluate a licensee's compliance with construction requirements on a system-wide basis.

74. *Eliminate the License Cap:* The Commission proposes to remove § 24.710 from the Commission's rules which prohibits an auction applicant from winning more than 98 C and F block licenses. When this rule was established, the license cap was intended to facilitate a fair distribution of licenses within the C and F blocks. The Commission has achieved this objective; moreover, the Commission's proposal to reconfigure the available 30 MHz C block licenses would create additional C block licenses, while the Commission's proposal to eliminate the eligibility restrictions would increase the chances of C and F block licenses being won by a variety of entities.

75. *Retain the Spectrum Cap:* The Commission tentatively concludes that it should not grant the petitions seeking waiver of, or forbearance from, the CMRS spectrum cap rules and, accordingly, it would apply the spectrum cap to licenses of PCS C and F block spectrum to be auctioned in Auction 35. The Commission's proposal to revise the rules pertaining to the PCS C and F block spectrum helps ease the impact of the cap in this auction, and thereby renders cap relief unnecessary.

76. Section 309(j) of the Communications Act directs the Commission to disseminate licenses among a wide variety of applicants, including small businesses and other designated entities. Section 309(j) also requires that the Commission ensure the development and rapid deployment of

new technologies, products, and services for the benefit of the public, and recover for the public a portion of the value of the public spectrum resource made available for commercial use. The Commission believes that the proposals, alternatives, and tentative conclusions described in this Notice promote these goals while maintaining the fair and efficient execution of the auctions program. The Commission, therefore, seeks comment on all issues, proposals, tentative conclusions, and alternatives described in the Notice, and the impact they may have on small entities.

Announcement of Draft Policy for Evaluation of Conservation Efforts When Making Listing Decisions

AGENCIES: Fish and Wildlife Service, Interior; National Marine Fisheries Service, NOAA, Commerce.

ACTION: Announcement of draft policy.

SUMMARY: We, the Fish and Wildlife Service (FWS) and the National Marine Fisheries Service (NMFS) (Services), announce a draft policy for the evaluation of conservation efforts when making listing decisions under the Endangered Species Act of 1973, as amended (Act). While the Act requires us to consider all conservation efforts being made to protect a species, the policy identifies criteria we will use in determining whether formalized conservation efforts contribute to

making listing a species as threatened or endangered unnecessary. The policy applies to conservation efforts identified in conservation agreements, conservation plans, management plans, or similar documents developed by Federal agencies, State and local governments, Tribal governments, businesses, organizations, and individuals.

DATES: Send your comments on the draft policy to us (see **ADDRESSES** section) by August 14, 2000.

ADDRESSES: Send your comments on the draft policy to the Chief, Division of Endangered Species, U.S. Fish and Wildlife Service, 1849 C Street, N.W., (MS-420 ARLSQ), Washington, DC 20240, or to FW9 FWE_DTEFR@fws.gov. You may examine the comments we receive by appointment during normal business hours in Room 420, Arlington Square Building, 4401 North Fairfax Drive, Arlington, Virginia.

FOR FURTHER INFORMATION CONTACT: Nancy Gloman, Chief, Division of Endangered Species, U.S. Fish and Wildlife Service at the above address, telephone 703/358-2171 or facsimile 703/358-1735, or Wanda Cain, Chief, Endangered Species Division, National Marine Fisheries Service, 1315 East-West Highway, 13th Floor, Silver Spring, Maryland 20910, telephone 301/713-1401 or facsimile 301/713-0376.

SUPPLEMENTARY INFORMATION:

Draft Policy

Policy Purpose

We have proposed this policy in order to ensure consistent and adequate evaluation of formalized conservation efforts (conservation efforts identified in conservation agreements, conservation plans, management plans, and similar documents) when making listing decisions under the Act. We have also proposed this policy to facilitate the development of conservation efforts that sufficiently improve a species' status so as to make listing the species as threatened or endangered unnecessary.

Policy Scope

This policy applies to our evaluation of all formalized conservation efforts when making listing decisions for species not listed, including findings on petitions to list species and decisions on whether to assign candidate status, to remove candidate status, to issue proposed listing rules, and to finalize or withdraw proposed listing rules. This policy applies to formal conservation efforts developed with or without a specific intent to influence a listing

decision and with or without the involvement of the Services. This policy identifies criteria we will use to evaluate the certainty of implementation and effectiveness of formalized conservation efforts that have not yet been implemented or have been recently implemented and have not yet demonstrated effectiveness at the time of a listing decision. The criteria will be used to determine whether a formalized conservation effort contributes to making listing a species unnecessary or contributes to forming a basis for listing a species as threatened rather than endangered.

In many cases, conservation efforts affecting a particular species will have been implemented and will have shown results well before the time of a listing decision. In those cases, development of an agreement or plan, and an evaluation of its certainty of implementation and effectiveness, would not be necessary, because the results of the implemented conservation efforts will be considered when we make a listing decision.

The policy does not provide guidance for determining the level of conservation or the types of conservation efforts needed to make listing unnecessary. Also, the policy does not provide guidance for determining when parties should enter into agreements or when a conservation effort should be included in an agreement or plan. The policy provides guidance only for evaluating the certainty of implementation and effectiveness of formalized conservation efforts. Although the certainty of implementation and effectiveness of a conservation effort may be considered in determining the appropriateness of including the effort in an agreement or plan, no particular level of certainty must be provided in order to include the effort in an agreement or plan.

Definitions

“Adaptive management is the process of monitoring the results of implemented conservation efforts, then adjusting those efforts according to what was learned.

“Agreements and plans” include conservation agreements, conservation plans, management plans, or similar documents approved by Federal agencies, State and local governments, Tribal governments, businesses, organizations, or individuals.

“Candidate species,” as defined by regulations at 50 CFR 424.02(b), means any species being considered for listing as an endangered or a threatened species, but not yet the subject of a proposed rule. However, the FWS includes as candidate species those

species for which the FWS has sufficient information on file relative to status and threats to support issuance of proposed listing rules. The NMFS includes as candidate species those species for which it has information indicating that listing may be warranted but for which sufficient information to support actual proposed listing rules may be lacking. The term “candidate species” used in this policy refers to those species designated as candidates by either of the Services.

“Conservation efforts,” for the purpose of this policy, are specific actions, activities, or programs designed to eliminate or reduce threats or otherwise improve the status of a species. Conservation efforts may involve restoration, enhancement, maintenance, or protection of habitat; reduction of mortality or injury; or other beneficial actions.

“Formalized conservation efforts” are conservation efforts identified in a conservation agreement, conservation plan, management plan, or similar document.

Authority

Section 4(a)(1) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1533(a)(1)), states that we must determine whether a species is threatened or endangered because of any of the following five factors:

- (A) The present or threatened destruction, modification, or curtailment of its habitat or range;
- (B) Overutilization for commercial, recreational, scientific, or educational purposes;
- (C) Disease or predation;
- (D) The inadequacy of existing regulatory mechanisms; and
- (E) Other natural or manmade factors affecting its continued existence.

Although this language focuses on impacts negatively affecting a species, section 4(b)(1)(A) requires us also to “tak[e] into account those efforts, if any, being made by any State or foreign nation, or any political subdivision of a State or foreign nation, to protect such species, whether by predator control, protection of habitat and food supply, or other conservation practices, within any area under its jurisdiction, or on the high seas.” Read together, sections 4(a)(1) and 4(b)(1)(A) and our regulations at 50 CFR section 424.11(f) require us to consider any State or local laws, regulations, ordinances, programs, or other specific conservation measures that either positively or negatively affect a species’ status (*i.e.*, efforts that create, exacerbate, reduce, or remove threats identified through the section 4(a)(1) analysis). The manner in which the

section 4(a)(1) factors are framed supports this conclusion. Factor (D) for example—“the inadequacy of existing regulatory mechanisms”—indicates that we might find existing regulatory mechanisms adequate to justify a determination not to list a species.

In addition, we construe the analysis required under section 4(a)(1), in conjunction with the directive in section 4(b)(1)(A), to authorize and require us to consider whether the actions of any other entity, in addition to actions of State governments, create, exacerbate, reduce, or remove threats to the species. Factor (E) in particular—any “manmade factors affecting [the species’] continued existence”—requires us to consider the pertinent laws, regulations, programs, and other specific actions of any entity that either positively or negatively affect the species. Thus, the analysis outlined in section 4 requires us to consider any conservation efforts by State or local governments, Tribal governments, Federal agencies, businesses, organizations, or individuals that positively affect the species’ status.

Conservation efforts are often informal, such as when a property owner implements conservation measures for a species simply because of concern for the species or interest in protecting its habitat, and without any specific intent to affect a listing decision. Conservation efforts are also often formalized in conservation agreements, conservation plans, management plans, or similar documents. The development and implementation of such agreements and plans have been an effective mechanism for conserving declining species and have, in some instances, made listing unnecessary. These efforts are consistent with the Act’s finding that “encouraging the States and other interested parties * * * to develop and maintain conservation programs. * * * is a key * * * to better safeguarding, for the benefit of all citizens, the Nation’s heritage in fish, wildlife, and plants’ (16 U.S.C. 1531 (a)(5)).

In some situations, the listing process may be under way, and formalized conservation efforts have yet to be implemented. We may determine that a formalized conservation effort that has not yet been implemented reduces or removes a threat to a species when we have sufficient certainty that it will be implemented and effective.

Deciding or determining whether a species meets the definition of threatened or endangered requires us to make a prediction about the future persistence of a species. Central to this concept is a prediction of future

conditions, including consideration of future negative effects of anticipated human actions. We cannot protect species without taking into account future threats that have a high likelihood of affecting a species. The Act does not require that, and species conservation would be compromised if, we wait until a threat is actually harming individuals before we list the species as threatened or endangered. Similarly, the magnitude and/or severity of a threat may be reduced as a result of future positive human actions. Common to the consideration of both the effects of future negative human actions and the effects of future positive human actions is a determination of the certainty that the actions will occur and that their effects on the species will be realized. We therefore consider both future negative and future positive human impacts when assessing the status of the species.

For example, if a State recently instituted a program to eliminate collection of a reptile being considered for listing, we must assess the predicted consequences of this program on the status of the species. For those parts of the program recently instituted, a record to determine the effect on the species may not yet exist. Therefore, we must base an assessment of the adequacy of the program on predicted compliance and effects. Such an assessment would reasonably include an evaluation of the State's ability to enforce new regulations, educate the public, monitor compliance, and monitor the effects of the program on the species. We would determine that the program reduces the threat of overutilization of the species through collecting if we found sufficient certainty that the program would be implemented and effective.

The language of the Act supports this approach. The definitions for both "endangered species" and "threatened species" connote future status, which indicates that consideration of whether a species should be listed depends in part on identification and evaluation of future actions that will reduce or remove, as well as create or exacerbate, threats to the species. In addition, the first factor in section 4(a)(1)—the present or threatened destruction, modification, or curtailment of [the species'] habitat or range—explicitly requires us to analyze both current actions affecting a species' habitat or range and those actions that are sufficiently certain to occur in the future and affect a species' habitat or range. However, future actions by Federal agencies, States, Tribes, and private entities that create, exacerbate, reduce, or remove threats are not limited to

actions affecting a species' habitat or range. Congress did not intend for us to consider current and future actions affecting a species' habitat or range, yet ignore future actions that will influence overutilization, disease, predation, regulatory mechanisms, or other natural or manmade factors. Therefore, we construe Congress' intent, as reflected by the language of the Act, to require us to consider both current actions that are affecting a species' status and sufficiently certain future actions—either positive or negative—that will affect habitat, range, overutilization, disease, predation, regulatory mechanisms, or other natural or manmade factors.

The consideration of both positive and negative effects of human actions in making a prediction about the future persistence of a species also requires consideration of voluntary human actions. The threats to species that lead to listing as threatened or endangered are often the result of voluntary human actions. For example, decisions to develop property, harvest timber, or otherwise use or manage land or other natural resources in ways that pose a threat to a species are typically voluntary, as opposed to mandatory, actions. We must factor the effects of these voluntary detrimental actions into our assessment. Similarly, decisions to forego development or other changes in land use or management that would pose a threat to a species, as well as decisions to initiate conservation efforts that will have a positive effect on the species, are often voluntary, as opposed to mandatory, actions. Voluntary beneficial actions, whether initiated independently or through participation in a formalized conservation effort, must also be factored into our assessment.

For example, a State could have a voluntary incentive program for protection and restoration of riparian habitat that includes providing technical and financial assistance for fencing to exclude livestock. To assess the effectiveness of this voluntary program, we would evaluate the level of participation (*e.g.*, number of participating landowners or number of stream-miles fenced), the length of the commitment by landowners, and effects of the program on the species. We would determine that the program reduces the threat of habitat loss and degradation if we find sufficient certainty that the program is effective.

Evaluation Criteria

Conservation agreements, conservation plans, management plans, and similar documents generally identify numerous conservation efforts

(*i.e.*, actions, activities, or programs) to benefit the species. In determining whether a formalized conservation effort contributes to making listing a species as threatened or endangered unnecessary or contributes to forming a basis for listing as threatened rather than endangered, we must evaluate whether the conservation effort affects the status of the species. Two factors are key in that evaluation: (1) For those efforts yet to be implemented, the certainty that the conservation effort will be implemented and (2) the certainty that the conservation effort will be effective. Because the certainty of implementation and effectiveness of formalized conservation efforts may vary, we will evaluate each effort individually. In order for us to determine that a formalized conservation effort contributes to making listing a species unnecessary or contributes to forming a basis for listing a species as threatened rather than endangered, the conservation effort must meet the following criteria.

A. The certainty that the conservation effort will be implemented:

1. The conservation effort; the party(ies) to the agreement or plan that will implement the effort; and the staffing, funding level, funding source, and other resources necessary to implement the effort are identified.
2. The authority of the party(ies) to the agreement or plan to implement the conservation effort and the legal procedural requirements necessary to implement the effort are described.
3. Authorizations (*e.g.*, permits, landowner permission) necessary to implement the conservation effort are identified, and a high level of certainty that the party(ies) to the agreement or plan that will implement the effort will obtain these authorizations is provided.
4. The level of voluntary participation (*e.g.*, by private landowners) necessary to implement the conservation effort is identified, and a high level of certainty that the party(ies) to the agreement or plan that will implement the conservation effort will obtain that level of voluntary participation is provided (*e.g.*, an explanation of why incentives to be provided are expected to result in the necessary level of voluntary participation).
5. All regulatory mechanisms (*e.g.*, laws, regulations, ordinances) necessary to implement the conservation effort are in place.
6. A high level of certainty that the party(ies) to the agreement or plan that will implement the conservation effort will obtain the necessary funding is provided.

7. An implementation schedule (including completion dates) for the conservation effort is provided.

8. The conservation agreement or plan that includes the conservation effort is approved by all parties to the agreement or plan.

B. The certainty that the conservation effort will be effective:

1. The nature and extent of threats being addressed by the conservation effort are described.

2. Explicit objectives for the conservation effort and dates for achieving them are stated.

3. The steps necessary to implement the conservation effort are identified.

4. Quantifiable, scientifically valid parameters that will demonstrate achievement of objectives, and standards for these parameters by which progress will be measured, are identified.

5. Provisions for monitoring and reporting progress on implementation (based on compliance with the implementation schedule) and effectiveness (based on evaluation of quantifiable parameters) of the conservation effort are provided.

6. Principles of adaptive management are incorporated.

These criteria should not be considered comprehensive evaluation criteria. The certainty of implementation and effectiveness of a formalized conservation effort may also depend on species-specific, habitat-specific, location-specific, and action-specific factors. We will consider all appropriate factors in evaluating formalized conservation efforts. The specific circumstances will also determine the amount of information necessary to satisfy these criteria.

In addition, we will consider the estimated length of time that it will take for a formalized conservation effort to remove or reduce threats to the species. In some cases, the nature, severity, and/or imminence of threats to a species may be such that a conservation effort cannot be expected to remove or reduce threats quickly enough to make listing unnecessary.

An agreement or plan may contain numerous conservation efforts, not all of which are sufficiently certain to be implemented and effective. Those conservation efforts that are not sufficiently certain to be implemented and effective cannot contribute to a determination that listing is unnecessary or a determination to list as threatened rather than endangered. To determine that a formalized conservation effort contributes to making listing a species as threatened or endangered unnecessary, or contributes

to forming a basis for listing as threatened rather than endangered, we must find that the conservation effort is sufficiently certain to be implemented and effective so as to contribute to the elimination or adequate reduction of one or more threats to the species identified through the section 4(a)(1) analysis. The elimination or adequate reduction of section 4(a)(1) threats may lead to a determination that the species does not meet the definition of threatened or endangered, or is threatened rather than endangered.

Additional Considerations

Federal agencies, State and local governments, Tribal governments, businesses, organizations, or individuals contemplating development of an agreement or plan should be aware that, because the Act mandates specific timeframes for making listing decisions, we cannot delay the listing process to allow additional time to complete the development of an agreement or plan. Nevertheless, we encourage the development of agreements and plans even if they will not be completed prior to a final listing decision. Such an agreement or plan could serve as the foundation for a special rule under section 4(d) of the Act, which would establish only those prohibitions necessary for the conservation of a threatened species, or for a recovery plan, and could lead to earlier recovery and delisting.

In addition, we encourage the development of agreements or plans even if they do not meet the criteria listed in this policy. We hope that efforts contained in such plans would be implemented by the time we must make a listing decision. If efforts have been, or will be, implemented by the time we must make a listing decision, there is no need to provide certainty of implementation. However, prior to making a listing decision, we would evaluate the certainty of effectiveness of any newly implemented efforts.

If we make a decision not to list a species or to list the species as threatened rather than endangered based in part on the contributions of a formalized conservation effort, we will monitor the status of the species and the progress in implementation of the conservation effort. If there is (1) A failure to implement the conservation effort in accordance with the implementation schedule; (2) a failure to achieve objectives; or (3) a failure to modify the conservation effort to adequately address an increase in the severity of a threat, we will reevaluate the status of the species and consider whether initiating the listing process is

necessary. Initiating the listing process may consist of designating the species as a candidate species and assigning a listing priority, issuing a proposed rule to list, issuing a proposed rule to reclassify, or issuing an emergency listing rule.

Public Comments Solicited

We request comments on four aspects of this notice: (1) The content of the draft policy; (2) other related issues; (3) the clarity of this notice; and (4) the collection of information from the public expected to be associated with preparation and submission of conservation agreements and plans and with monitoring and reporting the implementation progress and effectiveness of conservation efforts, which requires Office of Management and Budget (OMB) approval under the Paperwork Reduction Act.

Comments on the Content of the Draft Policy

We solicit your comments on the content of this draft policy. We are especially interested in your comments on the criteria that we will use to evaluate the certainty that a formalized conservation effort will be implemented. For example, must all regulatory mechanisms (e.g., laws, regulations, ordinances) necessary to implement a conservation effort actually be in place in order for us to determine that the effort contributes to making listing a species unnecessary or contributes to forming a basis for listing a species as threatened rather than endangered? Or is it sufficient that the conservation effort include a high level of certainty that the regulatory mechanisms will be adopted by a specified date? Similarly, should funding, authorizations, and voluntary participation be in place at the time a conservation effort is evaluated, or is it sufficient that the conservation effort include a high level of certainty that they be in place by a specified date? In addition, how might an entity demonstrate a high level of certainty of implementation of a conservation effort? In determining a final action on this draft policy, we will take into consideration all comments we receive during the comment period.

Comments on Other Related Issues

Also, we are interested in your comments on the timing of the development of conservation agreements or plans. We encourage early development of conservation agreements or plans, prior to the need to propose a species for listing, such as at or before the time a species is placed

on the candidate list. However, agreements or plans often have been initiated or accelerated when one of the Services has proposed to list a species. Listing proposals generally provide a 60-day comment period. At the latest, we should receive conservation agreements or plans before the end of the comment period in order to be considered in a final listing decision. Beginning development of a conservation agreement or plan after the species is proposed for listing generally does not allow much time for implementation of any new conservation efforts identified as necessary in an agreement or plan. In that case, we must rely on our analysis of the certainty of implementation and effectiveness of those proposed efforts when making a listing decision. We hope that, by identifying specific criteria for evaluation of conservation efforts, this policy will encourage earlier development of conservation efforts such that many of the identified conservation efforts will be implemented by the time a final listing decision is made. Are there other ways to encourage earlier development of conservation efforts?

Clarity of the Policy

Executive Order 12866 requires agencies to write regulations that are easy to understand. We invite your comments on how to make this policy easier to understand, including answers to the following questions: (1) Is the discussion in the "Supplementary Information" section of the preamble helpful in understanding the policy? (2) Does the policy contain technical language or jargon that interferes with its clarity? (3) Does the format of the policy (grouping and order of sections, use of headings, paragraphing, etc.) aid or reduce its clarity? (4) What else could we do to make the policy easier to understand?

Send your comments concerning the content or clarity of this draft policy to the FWS (see **ADDRESSES** section).

Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (Pub. L. 104-13; 44 U.S.C. 3501 *et seq.*) requires Federal agencies to obtain OMB approval for certain collections of information from the public. We may not conduct or sponsor, and you are not required to respond to, a collection of information unless it displays a currently valid OMB control number. Simultaneous to publication of this notice, we are requesting OMB approval for information collection associated with this draft policy. The OMB regulations implementing provisions of

the Paperwork Reduction Act require agencies to provide interested members of the public and other affected agencies an opportunity to comment on agency information collection and recordkeeping activities (see 5 CFR 1320.11). Our request for approval from OMB for a collection of information from the public must include an estimate of the information collection and recordkeeping burden that would result from our draft policy if made final.

The development of a conservation agreement, conservation plan, management plan, or similar document by a State or other entity is completely voluntary. While this policy applies to formal conservation efforts developed with or without a specific intent to influence a listing decision and with or without the involvement of the Services, only those agreements or plans developed to influence a listing decision, with the involvement of the Service, constitute a new information collection requiring OMB approval under the Paperwork Reduction Act. In addition, when a State or other entity develops such an agreement or plan with the specific intent of making listing of a species unnecessary, the criteria identified in our draft policy can be construed as requirements placed on the development of the agreement or plan. In other words, a State or other entity must satisfy these criteria in order to obtain and retain the benefit they are seeking, which is making listing of a species as threatened or endangered unnecessary.

In addition, one of the criteria identified in our draft policy is that a provision must be included that provides for monitoring and reporting the progress and results of implementation of a conservation effort. Conservation professionals have long considered monitoring and reporting to be an essential component of scientifically sound agreements and plans and routinely incorporate monitoring and reporting into these agreements and plans. We included a monitoring and reporting criterion in this policy to ensure consistency with sound biological and conservation principles and for completeness. Although monitoring and reporting provisions are already generally included in agreements and plans, this criterion also constitutes a new information collection requiring OMB approval under the Paperwork Reduction Act.

Estimating the amount of work associated with developing a conservation agreement or plan with the intent of making listing unnecessary and

with monitoring and reporting the progress and results of implementation of conservation efforts is difficult because: (1) The development (and associated monitoring) of conservation efforts is completely voluntary, and we cannot predict who will decide to develop these efforts; (2) we cannot predict which species will become the subjects of conservation efforts and, therefore, cannot predict the nature and extent of conservation efforts and monitoring included in agreements and plans; and (3) many plans, such as agency land management plans, are developed to satisfy requirements of other laws or for other purposes, and we cannot predict whether, or the extent to which, some of these plans may be expanded to attempt to make listing unnecessary. For these reasons, we must base our estimate of the amount of work associated with developing conservation agreements or plans and monitoring and reporting of conservation efforts on information from conservation agreements developed in the past.

A. Fish and Wildlife Service

Since 1994, the FWS has entered into approximately 60 conservation agreements. About 14 of these agreements contributed to making listing the covered species as threatened or endangered unnecessary. Based on this information, we have entered into an average of about 15 agreements per year, 3 or 4 of which have made listing unnecessary. We expect that these averages will remain stable or increase. We will estimate that annually six agreements will be developed with the intent of making listing unnecessary, that four of these will be successful in making listing unnecessary, and, therefore, in four cases, the States or other entities who develop these agreements will carry through with their monitoring commitments in order to keep the covered species from being listed.

We estimate that each agreement developed with the intent of making listing unnecessary will require an average of 320 person-hours to complete. This estimate is a one-time burden for each plan developed. The burden to six States or other entities who choose to develop an agreement in a given year totals approximately 1,920 hours.

We estimate that, for each conservation effort, the State or other entity will spend annually an average of 160 person-hours to conduct the monitoring and 40 person-hours to prepare a report. Therefore, the annual burden to four States or other entities to

complete monitoring and reporting totals approximately 800 hours.

B. National Marine Fisheries Service

Since 1997, NMFS has entered into three conservation agreements, all of which we determined at the time contributed to making it unnecessary to list the covered species as threatened or endangered. We are assuming that at least one agreement will be developed annually with the intent of making listing unnecessary, and that about half of these will be successful in making listing unnecessary. We estimate that each agreement developed with the intent of making listing unnecessary will require an average of 320 person-hours to complete. This is a one-time burden for each plan developed. Therefore, the burden to one State or another entity that chooses to develop an agreement in a given year totals about 320 hours.

For each conservation effort, the State or other entity will spend an average of 160 hours to conduct the monitoring and 40 hours to prepare a report. Therefore, the annual burden to a State or another entity to complete monitoring and reporting totals about 200 hours. Over the next 3 to 5 years, we anticipate that two States or entities will have agreements in place that will require monitoring and reporting. Therefore, the monitoring and reporting requirement will total about 400 hours each year.

The Services will submit a request to OMB for approval of this collection of information concurrent with the proposed rulemaking action. We are also soliciting comments on this information collection approval request. We invite comments on: (1) Whether the collection of information is necessary for the proper performance of our functions, including whether the information will have practical utility; (2) the accuracy of our estimate of the information collection burden; (3) ways to enhance the quality, utility, and clarity of the information we would collect; and (4) ways to minimize the burden of the information collection on respondents, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.

Send your comments on specific information collection requirements to the Desk Officer for the Interior Department and Commerce Department, Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503.

OMB has up to 60 days to approve or disapprove information collection but

may respond after 30 days. Therefore, to ensure consideration, you should submit your comments concerning information collection to OMB at the above address by July 13, 2000.

Economic Analysis

This draft policy will not have an annual economic effect of \$100 million or adversely affect an economic sector, productivity, jobs, the environment, or other units of government. This draft policy will not materially affect entitlements, grants, user fees, loan programs, or the rights and obligations of their recipients. This draft policy will not raise novel legal or policy issues.

The Departments of the Interior and Commerce certify that this draft policy will not have a significant economic effect on a substantial number of small entities as defined under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). The Services expect that this draft policy will not result in any significant additional expenditures by entities that develop formalized conservation efforts.

This policy identifies criteria that a conservation effort must satisfy to ensure certainty of implementation and effectiveness and for the Services to determine that the conservation effort contributes to making listing a species unnecessary or contributes to forming a basis for listing a species as threatened rather than endangered. The Services developed this draft policy to ensure consistent and adequate evaluation of agreements and plans when making listing decisions and to help States and other entities develop agreements and plans that will be adequate to make listing species unnecessary.

The criteria in this policy primarily describe elements that are already included in conservation efforts and that constitute sound conservation planning. For example, the criteria requiring identification of responsible parties, obtaining required authorizations, establishment of objectives, and inclusion of an implementation schedule and monitoring provisions are essential for directing the implementation and affirming the effectiveness of conservation efforts. These kinds of "planning" requirements are generally already included in conservation efforts and do not establish any new implementation burdens. Rather, these requirements will help to ensure that conservation efforts are well planned and, therefore, increase the likelihood that conservation efforts will ultimately be successful in making listing species unnecessary.

The development of an agreement or plan by a State or other entity is

completely voluntary. However, when a State or other entity voluntarily decides to develop an agreement or plan with the specific intent of making listing a species unnecessary, the criteria identified in this policy can be construed as requirements placed on the development of such agreements or plans; the State or other entity must satisfy these criteria in order to obtain and retain the benefit they are seeking, which is making listing of a species as threatened or endangered unnecessary.

Other criteria require demonstrating certainty of implementation and effectiveness of conservation efforts. We have always considered the certainty of implementation and effectiveness of conservation efforts when making listing decisions. Although we have not had explicit evaluation criteria in the past, we believe the criteria in this policy are consistent with the requirements of the Endangered Species Act. Therefore, we believe that no economic effects on States and other entities will result from compliance with the criteria in this policy.

Furthermore, publication of this policy will have positive effects by informing States and other entities of the criteria we will use in evaluating formalized conservation efforts when making listing decisions, and thereby helping States and other entities develop voluntary formalized conservation efforts that will be successful in making listing unnecessary. Therefore, we believe that informational benefits will result from issuing this policy. We believe these benefits, although important, will be insignificant economically.

Required Determinations

Unfunded Mandates Reform Act. In accordance with the Unfunded Mandates Reform Act (2 U.S.C. 1501, *et seq.*):

a. The Services certify pursuant to the Unfunded Mandates Reform Act, 2 U.S.C. 1502 *et seq.*, that this rulemaking will not impose a cost of \$100 million or more in any given year on local or State governments or private entities. The Services expect that this draft policy will not result in any significant additional expenditures by entities that develop formalized conservation efforts (see Discussion above).

b. This draft policy will not produce a Federal mandate of \$100 million or greater in any year, that is, it is not a "significant regulatory action" under the Unfunded Mandates Reform Act.

Takings. In accordance with Executive Order 12630, this draft policy does not have significant takings implications. While State or local

governments may choose to directly or indirectly implement actions that may have property implications, they would do so as a result of their own decisions, not as a result of this policy. This policy has no provision that would take private property rights.

Federalism. In accordance with Executive Order 13132, this draft policy does not have significant Federalism effects.

Civil Justice Reform. In accordance with Executive Order 12988, this draft policy does not unduly burden the judicial system and meets the requirements of sections 3(a) and 3(b)(2) of the Order. With the guidance provided in the draft policy, requirements under section 4 of the Endangered Species Act will be clarified to entities that voluntarily develop formalized conservation efforts.

National Environmental Policy Act. We have analyzed this draft policy in accordance with the criteria of the National Environmental Policy Act (NEPA) and the Department of the Interior Manual (318 DM 2.2(g) and 6.3(D)). This draft policy does not constitute a major Federal action significantly affecting the quality of the human environment. The Service has determined that the issuance of the draft policy is categorically excluded under the Department of the Interior's NEPA procedures in 516 DM 2, Appendix 1 and 516 DM 6, Appendix 1. The National Oceanic and Atmospheric Administration (NOAA) has determined that the issuance of this policy qualifies for a categorical exclusion as defined by NOAA 216-6 Administrative Order, Environmental Review Procedure.

Section 7 Consultation. The Service has determined that issuance of this draft policy will not affect species listed as threatened or endangered under the Endangered Species Act, and, therefore, a section 7 consultation on this draft policy is not required.

Government-to-Government Relationship With Tribes. In accordance with the President's memorandum of April 29, 1994, "Government-to-Government Relations with Native American Tribal Governments" (59 FR 22951) and 512 DM 2, this draft policy does not directly affect Tribal resources. The effect of this draft policy on Native American Tribes would be determined on a case-by-case basis with individual evaluations of formalized conservation efforts. Under Secretarial Order 3206, the Service will, at a minimum, share with the entity that developed the formalized conservation effort any information provided by the Tribes, through the public comment period or formal submissions, and advocate the

incorporation of conservation efforts that will restore or enhance Tribal trust resources. After consultation with the Tribes and the entity that developed the formalized conservation effort and after careful consideration of the Tribe's concerns, the Service must clearly state the rationale for the recommended final decision and explain how the decision relates to the Service's trust responsibility. Accordingly:

a. We have not yet consulted with the affected Tribe(s). This requirement will be addressed with individual evaluations of formalized conservation efforts.

b. We have not yet treated Tribes on a government-to-government basis. This requirement will be addressed with individual evaluations of formalized conservation efforts.

c. We will consider Tribal views in individual evaluations of formalized conservation efforts.

d. We have not yet consulted with the appropriate bureaus and offices of the Department about the identified effects of this draft policy on Tribes. This requirement will be addressed with individual evaluations of formalized conservation efforts.

Dated: April 9, 2000.

Jamie Rappaport Clark,
Director, Fish and Wildlife Service.

Dated: May 19, 2000.

Penelope D. Dalton,
Assistant Administrator for Fisheries,
National Marine Fisheries Service.

Endangered and Threatened Wildlife and Plants; 90-day Finding for Petitions To List *Horkelia hendersonii* (Henderson's horkelia) and *Lupinus aridus* ssp. *ashlandensis* (Ashland lupine) as Threatened or Endangered and Commencement of Status Review

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of 90-day petition finding and initiation of status review.

SUMMARY: We, the Fish and Wildlife Service (Service), announce a 90-day finding on two petitions to list *Horkelia hendersonii* (Henderson's horkelia) and *Lupinus aridus* ssp. *ashlandensis* (Ashland lupine) as endangered or threatened species throughout their ranges under the Endangered Species

Act of 1973, as amended (Act). We find that the petitions presented substantial information indicating that listing of both species may be warranted. We are initiating a status review to determine if listing of either or both species is warranted.

DATES: The finding announced in this document was made May 31, 2000. To be considered in the 12-month finding for this petition, information and comments should be submitted to us by September 11, 2000.

ADDRESSES: Data, information, comments, or questions concerning this petition should be submitted to the State Supervisor, Oregon State Office, U.S. Fish and Wildlife Service, 2600 SE. 98th Avenue, Suite 100, Portland, Oregon 97266. The petition finding, supporting data, and comments will be available for public inspection, by appointment, during normal business hours at the above address.

FOR FURTHER INFORMATION CONTACT: Dr. Andrew F. Robinson, Jr. (see **ADDRESSES** section) (telephone 503/231-6179).

SUPPLEMENTARY INFORMATION:

Background

Section 4(b)(3)(A) of the Act (16 U.S.C. 1531 *et seq.*) requires that we make a finding on whether a petition to list, delist, or reclassify a species, or to revise a critical habitat designation, presents substantial scientific or commercial information to demonstrate that the petitioned action may be warranted. To the maximum extent practicable, this finding is to be made within 90 days of the receipt of the petition, and we are to publish the finding promptly in the **Federal Register**. If the finding is that substantial information was presented, we are also required to promptly commence a review of the status of the involved species and to disclose its findings within 12 months (12-month finding).

We received two separate formal petitions from the Rogue Group Sierra Club of Ashland, Oregon, both dated September 9, 1999, to list *Horkelia hendersonii* (Henderson's horkelia) and *Lupinus aridus* ssp. *ashlandensis* (Ashland lupine) as endangered or threatened throughout their ranges, and to designate critical habitat. Accompanying the petitions was supporting information relating to taxonomy, ecology, threats, and past and present distribution of *H. hendersonii* and *L. aridus* ssp. *ashlandensis*.

The processing of the petitions conforms with our Listing Priority Guidance published in the **Federal**
