

actions we believe would most effectively achieve the refuge's purposes, vision, and goals, and respond to the issues raised during the scoping period. It emphasizes the management of specific refuge habitats to support species of conservation concern in the Chesapeake Bay region. In particular, it emphasizes forest biodiversity and ecosystem function. This includes the restoration of a number of impoundments and grasslands to forested areas to support forest interior-dwelling bird species and other forest-dependent species. In addition, alternative B strives to promote wildlife-dependent public uses, while allowing for non-wildlife-dependent public uses. In particular, it promotes higher quality hunting and fishing programs; expands wildlife observation, viewing, and photography opportunities; and initiates new interpretive program and environmental education opportunities.

Alternative C (Maximize Forest Interior Restoration and Emphasize Wildlife-dependent Public Use Activities)

Alternative C would focus on maximizing interior forest habitat. This would require active management to restore a majority of impoundments and grasslands into forested areas that would support forest interior-dwelling species, in addition to other species of conservation concern. Alternative C also focuses on accommodating wildlife-dependent public uses while minimizing non-wildlife-dependent uses, particularly by expanding wildlife observation, viewing, and photography opportunities and reducing the number of special events and interpretive programming.
