

The goal of this recovery plan is to control or ameliorate impacts from current threats to *Astragalus magdalenae* var. *peirsonii* such that the taxon no longer requires protections afforded by the Act and, therefore, warrants delisting. Continued outreach with our partners is needed to ensure long-term protections are afforded to *A. m. var. peirsonii* and its habitat. The site-specific management actions identified in the draft recovery plan are as follows:

(1) Continue monitoring of *Astragalus magdalenae* var. *peirsonii*, and ensure that the monitoring protocol informs management of the taxon and allows us to accurately assess population trends;

(2) Conduct additional research to inform management actions throughout the range of *Astragalus magdalenae* var. *peirsonii*;

(3) Ameliorate Factor A threats associated with threatened destruction, modification, or curtailment of the habitat or range; and

(4) Ameliorate Factor E threats associated with other natural or manmade factors affecting the continued existence of *Astragalus magdalenae* var. *peirsonii*.
